

National Provider Identification Number

This is a unique identification number for Health Care professionals which will be used by all health plans nationally. These numbers will be used in the administrative and financial transactions specified by HIPAA. Every Health Care provider in the United States is required to have an NPI number.

The UWHC GME office applied for and received an NPI number for you. Going forward, you will need to manage your information with the NPI database, including name, address and state license number changes. We are providing you with the information to manage your NPI number going forward.
