You may be taking several medicines for your cycle. Your physician will discuss which medicine is the most appropriate for you. Some of the most commonly prescribed medicines are provided here for your reference.

- Lupron
- Microdose Lupron
- Cetrotide
- Ganirelix
- Human chorionic gonadotropin
- Ovidrel
- Progesterone in oil
- Crinone 8% progesterone gel
- Endometrin vaginal insert
- Gonal-F
- Follistim
- Menopur
- Luveris

In addition to local pharmacies, listed below are a few specialty mail order/internet pharmacy options that are reliable and reasonably priced. This is neither a comprehensive list nor an endorsement. You may find it useful to contact these or other pharmacies to compare prices prior to your treatment cycle.

- Costco (608) 824-3959 costco.com
- Freedom (800) 660-4283 freedomdrug.com
- Mandell's (877) 252-0553 mandellspharmacy.com
- Walgreens Specialty (800) 424-9002 walgreens.com

Please note: the above information pertains to self-administered, prescription medication.

Injection teaching for intrauterine insemination (IUI) patients will be completed during the baseline ultrasound visit. Patients undergoing in vitro fertilization (IVF) will learn how to self-inject by viewing an online demonstration. You can review how to self-administer medications on our website, uwhealth.org/generations. Select Patient Resources and on the far right of the screen, you will find a link to injection training.

Thank you for choosing Generations Fertility Care. We look forward to helping you achieve your reproductive goals.
