

The Geriatric Consultation Clinics are comprised of three clinics.

- Geriatric Assessment Clinic (GAC)
- Memory Assessment Clinic
- Mobility and Falls Clinic

**Pre-Visit:** The specialty triage RN will review each referral and call the patient to review health history. It will then be determined which specialty clinic is most appropriate for the patient.

**Visit:** The geriatric team of professionals carefully assesses each patient by reviewing the patient's condition, history and progress. The team collaborates to develop recommendations for the patient's care and follow-up.

**Patient benefits:**

- Improved functional status
- Decreased chance of admission to hospital, nursing home or other care facility
- Decreased fall risk
- Reduced adverse effects of medications
- Improved quality of life
- Enhanced care management with primary care team

Memory Assessment Clinic  
Mobility and Falls Clinic

*Helping patients maintain their health and independence*

**UW**Health

## Geriatric Assessment Clinic

The **Geriatric Assessment Clinic** is for our older adults who may be at risk for losing independence, typically over the age of 75, with complicated health profiles that may include:

- Decline in functional status and/or declined capacity for self-care
- Falls
- Early or progressive memory difficulty
- Complicated medication management, including history of adverse drug reactions

- Late-life depression, anxiety, sleep issues and other psychiatric difficulties

The comprehensive consultation will occur during one to three outpatient visits.

The Geriatric team consists of:

- Geriatrician
- Geriatric psychiatry
- Nurse practitioner
- Nurse case manager
- Social worker
- Pharmacist

## Memory Assessment Clinic

The **Memory Assessment Clinic** is for patients typically over the age of 65. Patients who would benefit are those with any of the following concerns:

- Memory loss
- Impaired problem-solving
- Associated behavior problems
- Atypical features of dementia
- Evidence for declining functional status related to cognitive issues
- Cognitive changes that may be related to medications

The comprehensive consultation will occur during one to two outpatient visits.

The Geriatric team consists of:

- Geriatrician
- Neuropsychiatry
- Nurse practitioner
- Nurse case manager
- Social worker

*Enhancing care  
collaboratively with  
primary care providers.*

---

## Mobility and Falls Clinic

The **Mobility and Falls Clinic** is for our older adults who may be at risk for losing independence, typically over the age of 75, who are experiencing:

- Recurrent falls with or without physical injury
- Fear of falling with functional consequences
- Declining mobility and function

The comprehensive consultation will occur during one to two outpatient visits.

The Geriatric team consists of:

- Geriatrician
- Nurse practitioner
- Nurse case manager
- Social worker
- Physical therapist
