PORT - DISCONNECTING 5FU CADD® CASSETTE/BAG AND TUBING
(MiniLoc® Safety Needle With SAFSITE® valve)

SUPPLIES:
1- Sodium Chloride (Saline) Syringe Sharps® container
1- Heparin Syringe (100unit/ml) 1 - Alcohol wipe
2 - Pair Gloves 1 - Band-Aid®
1 - Red/blue cap

1. Wash hands and gather supplies.
2. Put on two pair of regular, disposable gloves.
3. Press STOP/START key. Press Y to confirm. Turn pump off by removing the 9-volt battery.
4. Close clamps on the pump tubing and IV line.
5. Wrap an alcohol wipe around the end of the chemotherapy (pump) tubing and disconnect it from the IV line.
6. Place the end of the pump tubing into the opening of the Sharps® container. Push the end far enough into the Sharps® container so that it does not fall out.
7. Attach the Saline syringe to IV line. Unclamp IV line and flush with Saline using the push/pause method. Clamp IV line. Remove syringe.
8. Attach Heparin syringe to IV line. Unclamp IV line and flush with Heparin, using the push/pause method. Clamp the IV line while holding pressure on the plunger of the syringe.
9. Remove the syringe and place a new red cap on the end of the IV line.
10. Remove old bag/cassette and tubing from pump. Wrap the tubing around the cassette and push it into the Sharps® container. Dispose of all other used supplies by double bagging and placing in the trash.

11. Remove dressing over MiniLoc® safety needle.
12. Securely hold the two, clear finger tabs down against the skin. Firmly pull the wings up until you hear or feel a “click” AND visually observe the orange dot.

14. Place a Band-Aid® over the site as needed.
15. Remove gloves inside out and place them in the Sharps® container.
16. Wash hands.
