

### UW Health Lung Transplant Program Survival Rate Data

Adult Lung Patient and Graft Survival		Adult Lung
One-Year Patient Survival	UW Health Rate	n=70 87.75%
	Expected Rate	90.39%
	National Rate	89.68%
One Year Graft Survival	UW Health Rate	n=70 87.75%
	Expected Rate	89.93%
	National Rate	89.07%

Adult Lung Patient and Graft Survival		Adult Lung
Three-Year Patient Survival	UW Health Rate	n=70 82.05%
	Expected Rate	76.62%
	National Rate	75.21%
Three-Year Graft Survival	UW Health Rate	n=71 80.85%
	Expected Rate	75.29%
	National Rate	73.63%

Survival rate data is updated approximately every six months. For future data, please refer to the UW Health Transplant Center website at [www.uwhealth.org/transplant](http://www.uwhealth.org/transplant).

Source: Scientific Registry of Transplant Recipients (SRTR). Data published July 6, 2021 at [www.srtr.org](http://www.srtr.org) Data for one-year survival rates represents patients receiving a transplant between 1/1/2018 and 3/12/2020 and between 7/1/2015 and 12/31/2017 for the three year cohort. Single organ transplants only.

To better understand the data and the Scientific Registry of Transplant Recipients (SRTR), please visit [www.uwhealth.org/SRTRFAQ](http://www.uwhealth.org/SRTRFAQ)

### Median Lung Transplant Waiting Times at UW Health

The median wait time at UW Health for all lung transplants from 6/1/2020 to 5/31/2021 was 12 days; however, your wait time will be based on your blood type, on the lung allocation score (LAS) assigned to you by UNOS and the availability of an appropriate organ.

	Median Waiting Time (in days)
LAS ≥ 36	7
LAS < 36	21

The median is the middle number of the data set; half of the patients transplanted in the last year had an LAS greater than 36 and the other half had an LAS less than 36. The table above represents the median of these two halves. Patients with higher LAS could wait fewer days while those with lower LAS could wait longer than the median. LAS is only one factor in waiting time to transplant.
