Caring for Yourself after Cardiac Catheterization/Arterial Angiography
Femoral Artery or Femoral Artery Closure Device

Your cardiac catheterization on _______________________________ was through the
RIGHT / LEFT femoral artery.

Going Home
▪ Have someone drive you home. You should not drive at all until at least 24 hours after your procedure. If medicine was used to help you relax during the procedure, you should not make any important personal or business decisions until the next day.
▪ Rest quietly today.

Care of the Procedure Site
▪ You may shower 24 hours after your procedure. Remove the bandage over the site before you take a shower.
▪ For the next 3 days:
  - Gently clean the site using soap and water while in the shower. Gently dry the site. Do not rub the site.
  - You may apply an antibacterial ointment (i.e. Neosporin®). Do not use lotions or powders in the area.
  - Cover the site with a band-aid or dressing. Make sure to cover the entire area. A square band-aid works well.
  - Keep the site clean and dry to prevent infection. If the band-aid or dressing becomes wet, remove it and replace it with a new one.
  - Inspect the site daily for redness, swelling, or drainage.

Activities
▪ Do not lift more than 10 pounds for 1 week or until the wound has healed.
▪ No vigorous activity or straining for 1 week like riding a bicycle or doing sit-ups. Walking on a flat surface for exercise is preferred during this first week.
▪ Do not sit in a bathtub, hot tub, or go into a swimming pool for 1 week or until the site is completely healed.

What to Expect
▪ Soreness or tenderness at the site that may last 1 week.
▪ Most procedure sites do not ooze blood. If mild oozing of blood from the site is present, it should not soak more than two different dressings.
▪ Bruising at the site that may take 2-3 weeks to go away.
▪ A small lump (dime to quarter size) which may last up to 6 weeks.
What to Do for Minor Pain

▪ You may take acetaminophen (Tylenol®) 325mg tablets every 4-6 hours.
▪ You may place an ice pack or warm pack over the site for 20 minutes every 2 hours. Gently wipe the site after you remove the pack if it is wet.

When and How to Call for Help

▪ If bleeding or sudden swelling should occur at the site. Apply direct pressure. If the bleeding does not stop after 10 minutes of placing constant pressure on the site, call 911 for help. Keep pressing until you get help.
▪ If your leg becomes numb, cold, or turns blue, call 911 for emergency help.

Call your doctor right away if you notice

▪ Any signs of infection including:
  o Redness, swelling, or drainage at the site.
  o Prolonged pain.
  o Fever over 100.4°F for two readings taken a few hours apart.
▪ Severe pain.

Phone Numbers

UW Heart and Vascular Care Clinic: (608) 263-1530

After 5 PM and before 8 AM and on weekends, and holidays, the paging operator will answer this number. Ask for the cardiac doctor on call. Give your name and phone number with the area code. The doctor will call you back.

Return to Work

You may return to work on _________________________________.

A. Medicines

Continue to take your present medicines as prescribed. Tell your doctor of any side effects. Do not stop taking any medicine without talking to your doctor first.

If you had a stent placed, you must take clopidogrel (Plavix®), prasugrel (Effient®) or ticagrelor (Brilinta®) until your heart doctor tells you to stop taking it. Before you go home, make sure you have a prescription for one of these medicines. If you are not able to pay for this medicine, tell your nurse or pharmacist.
B. Follow Up Visits or Needs

Refer to your After Visit Summary or After Hospital Care Plan for information about your medicines, laboratory tests and follow up appointments.

C. Your visit with Dr. _______________ could not be scheduled. The clinic will call you in the next few days. You should see this doctor in the next _____ weeks. If you do not hear from the clinic in the next few days, please call (608) 263-1530 to schedule your visit.

Your health care team may have given you this information as part of your care. If so, please use it and call if you have any questions. If this information was not given to you as part of your care, please check with your doctor. This is not medical advice. This is not to be used for diagnosis or treatment of any medical condition. Because each person’s health needs are different, you should talk with your doctor or others on your health care team when using this information. If you have an emergency, please call 911.
