

Nasal Saline Rinses

Nasal saline is a solution that loosens dry or thick mucus when sprayed or rinsed through the nose and gives relief of congested nasal passages.

Supplies you will need

- SinuCleanse™ system (neti pot) or SinuCleanse™ Squeeze™ or Sinus Rinse™
- Nasal saline recipe on the last page
- Warm distilled, boiled or faucet filtered water (96° to 99°F)
- A clean container

Procedure

1. Make a ‘nasal saline’ solution (salt water) using the recipe on the back page. **Note:** the salt solution is the same as tears and other body fluids, which is soothing to the fragile membranes inside the nose. If plain water is used, it could sting and make congestion worse.

For SinuCleanse™ Squeeze™ or Sinus Rinse™ system

- Remove cap from bottle.
- Pour the contents of the premixed SinuCleanse™ saline packet or ½ tsp of the dry mixture into the bottle.
- Fill the bottle with lukewarm distilled, boiled or faucet filtered water. Leave about half an inch between the water line and the top of the bottle.
- Tighten the cap on the bottle, and gently shake the bottle until contents of the packet have dissolved.

Lean over the sink, or if you prefer, do the nasal rinse when you shower. If you are using SinuCleanse™ Squeeze™, place the rim of the cap up to the right nostril and gently insert the tip forming a comfortable seal. If you are using Sinu Rinse™; place cap snugly against your nostril. Aim the tip at the back of your head, not at the top of your head.

Squeeze the bottle gently so that the solution enters the right nostril. Breathe normally through your mouth. In a few moments the solution will begin to drain out of the left nostril. Keep squeezing the bottle gently until you have used about half of the solution.

Remove the tip and repeat on other side. You may gently blow your nose between nasal rinses.

Repeat the nasal rinses with extra solution as ordered by your doctor.

Number of times per day: _____
Total amount of solution to use: _____

If you are using a SinuCleanse™ system:

- Fill pot with saline solution.
- Place tip of pot into nostril and tilt head as instructed.
- You may gently blow your nose between nasal rinses.
- Repeat the nasal rinses with extra solution as ordered by your doctor.
 - Number of times per day _____. Total amount of solution to use _____.

2. Your syringe, spoons to measure and mixing container must be kept clean. Wash them once a day with hot soapy water, rinse and lay out to dry between uses. The SinuCleanse™ (neti pot) may be hand washed or in the top-rack of dishwasher.
3. Do not share the bulb syringe or neti pot with anyone else.
4. You may store the unused saline on the counter for 7 days.
5. You may need to blow your nose a few times over the next 15 – 20 minutes after you do a nasal rinse as small amounts of fluid drain out.

Call your health care provider if you have any questions or concerns.

Nasal Saline Recipe

Nasal Saline is a solution that loosens dry or thick mucus when sprayed or rinsed through the nose and provides soothing relief of congested nasal airways.

Pickling and Canning salt can be found at the grocery store with canning supplies.

Mix these dry ingredients:

- (3) Heaping teaspoons of canning salt
- (1) Rounded teaspoon of baking soda

Mix these well and store in an airtight container.

This will give you enough mixture to make a number of batches of nasal saline when mixed with water as outlined here.

What you will need:

- Pickling and Canning Salt
- Baking Soda
- Distilled, boiled or filtered faucet water
- A measured 1/4 or 1/2 teaspoon
- A measuring cup (8 oz size)
- Small airtight container

How to mix the solution for use:

- Add a 1/4 to 1/2 measured teaspoon or less of the salt and soda mixture to 1/2 cup (4 oz) of warm distilled, boiled or faucet level filtered water.
- Stir well to dissolve and use.
- *If the solution causes a burning feeling in the nose, add less of the salt and soda mixture to water.*

Important: Once the salt and soda mixture is dissolved in water, it must be used in (7) days to avoid bacterial contamination.
