Milk and Soy Elimination Diet

The only known treatment for someone with food allergies or protein intolerance is to avoid foods that contain the allergen. Allergy to cow’s milk is more common in young children than adults. A milk “allergy” can happen very fast. Reactions come on quickly. The symptoms include fussiness, vomiting, wheezing, swelling, hives, itchy skin rashes, and blood in the stool. If the child has milk protein intolerance, the reactions are slower. The infant may be irritable, have reflux, stooling issues (may contain blood), vomiting, gagging, eczema and may refuse food.

If your child has milk protein allergy or protein intolerance, he or she may also have soy protein allergy or intolerance. Most children outgrow milk protein intolerance by 1-2 years old and a milk allergy by age 5. For some, it may last longer. For breastfed infants and children, the mother must watch her own intake as well as her child’s.

Foods now list common allergens, such as milk and soy. You still need to review food labels. Many products may have byproducts of milk or soy. Below is a list of foods and ingredients that have milk or soy protein.

### Milk or Soy Protein

- Butter or butter solids (milk)
- Butter fat (milk)
- Butter flavor (milk)
- Buttermilk (milk)
- Casein/Caseinate (milk)
- Cheese (milk)
- Cottage cheese (milk)
- Cream (milk)
- Curds (milk)
- Custard (milk)
- Edamame (soy)
- Ghee (milk)
- Half & half (milk)
- Hydrolyzed vegetable protein (soy)
- Kinnoko flour (soy)
- Kyodofu, freeze-dried tofu (soy)
- Lactalbumin (milk)
- Lactalbumin phosphate (milk)
- Lactoglobulin (milk)
- Lactoferrin (milk)
- Malted milk (milk)
- Milk protein, all (milk)
- Miso (soy)
- Natto (soy)
- Nisin (milk)
- Nougat (milk)
- Okara, soy pulp (soy)
- Pudding (milk)
- Rennet (milk)
- Sodium caseinate
- Sour cream (milk)
- Soy beans (soy)
- Soy concentrate (soy)
- Soy curds (soy)
- Soy flour (soy)
- Soy granules (soy)
- Soy grits (soy)
- Soy nuts (soy)
- Soy milk (soy)
- Soy sauce (soy)
- Shoyu sauce (soy)
- Soy sprouts (soy)
- Soy yogurt/cheese (soy)
- Supro (soy)
- Tamari (soy)
- Tempeh (soy)
- Teriyaki sauce (soy)
- Textured soy protein (soy)
- Textured vegetable protein, TVP (soy)
- Tofu (soy)
- Whey, any form (milk)
- Yakidofu (soy)
- Yuba (soy)
- Yogurt (milk)
Most people who are allergic to soy can safely eat highly processed soybean oil and soy lecithin. These are common ingredients in processed foods. Soy will be clearly labeled in the ingredient list or just below the list in a “contains statement.” Be sure to ask your doctor or dietitian if you have questions.

**Infant Formulas or Milk Substitutes**

- Protein hydrolysate formulas may be okay to use if your child has a cow’s milk protein intolerance. These include: Alimentum®, Nutramigen®.
- Amino acid-based formulas are often used for milk allergies. These include: Alfamino Infant®, Neocate® Infant and Elecare® Infant.

**Tips and Substitutions**

- Avoid buying “deli” meats. The slicers often are used to cut both meat and cheese. Often, they can clean it for you if you ask.
- Ask how foods are prepared at restaurants. Food may be cooked in a pan or on a surface that had butter on it. Ask for a clean pan.
- Orange juice with added calcium has about the same amount of calcium as milk, but not the same nutrients.
- Make sure milk substitutes (almond, oat, or coconut milks) are enriched with calcium and vitamin D.
- Read the ingredient lists on food labels even if you have had the product before. Ingredients may change.
- When you travel bring along some of your own special foods.
- Infants may need special formulas. Talk to your doctor or dietician about formula options. Do not assume "hypoallergenic" products are safe.
- Contact food companies if you are unsure of any ingredient on the label.
- If you breast feed, you likely will need to avoid milk and soy in your diet until your doctor says it’s okay to add back in. Talk to your doctor.

**Soy Substitutes**

- For soy flour, use wheat, rice, oat, barley, or potato flour.
- For soymilk, use rice or potato milk or any formula that does not contain milk or soy.
- For soy miso, use barley, plum or rice miso.
- For soy sauce, use pure concentrated beef or chicken broth or flavored salts.

**Who to Call**

If you are a UW Health patient and have more questions, please contact UW Health at one of the phone numbers listed below. You can also visit our website at www.uwhealth.org/nutrition

Nutrition clinics for UW Hospital and Clinics (UWHC) and American Family Children’s Hospital (AFCH) can be reached at: (608) 890-5500.

Nutrition clinics for UW Medical Foundation (UWMF) can be reached at: (608) 287-2770.
If you are a patient receiving care at UnityPoint – Meriter, Swedish American or a health system outside of UW Health, please use the phone numbers provided in your discharge instructions for any questions or concerns.

Your health care team may have given you this information as part of your care. If so, please use it and call if you have any questions. If this information was not given to you as part of your care, please check with your doctor. This is not medical advice. This is not to be used for diagnosis or treatment of any medical condition. Because each person's health needs are different, you should talk with your doctor or others on your health care team when using this information. If you have an emergency, please call 911.
