Skin Care after Cast Removal

- Your skin may be dry with rough, scaly patches. The new skin underneath may be quite tender.

- Gently wash your skin with mild soap and warm water for the next few days. Do not rub the skin roughly.

- Do not shave the area for at least three days.

- Use a non-irritating or alcohol and perfume-free body lotion to moisten to the skin.

- It is normal for your joints and muscles to be weak and sore from not using them. Your doctor may prescribe an exercise program to help you regain your strength and mobility.

- If you have been in a cast for more than 3 weeks, “dead” skin can build up under the cast. Once your cast is removed, soak your skin in warm water for 20 minutes twice a day. Gently rub dry with a terry towel. When drying your skin, be careful not to damage the new skin. Over time, the skin will become normal.

Your health care team may have given you this information as part of your care. If so, please use it and call if you have any questions. If this information was not given to you as part of your care, please check with your doctor. This is not medical advice. This is not to be used for diagnosis or treatment of any medical condition.
